

Label the Continents and Oceans

Lesson 3.05.01 | Week 12 | Unit 5: World Geography

CURATOR'S QUESTION

Why do museum visitors need labels for the continents and oceans on a world map?

ENTER THE MUSEUM

The Giant Map Has No Labels

CHAT FRAME

"You proved you can read maps, trace routes, and study evidence. That means you're ready for this."

"She pulls back the curtain -- behind it is the biggest map you've ever seen, stretching from floor to ceiling."

"But something is wrong. The continents and oceans are just shapes with no names."

"The World Map Hall opens soon. Let's start with the biggest pieces -- the continents and oceans."

SOCRATIC QUESTIONS

- *What do you notice about...*
- *If there are no labels, how...*
- *What would you label first...*

Service

Service means helping others and contributing to your community.

Today, you are serving the museum and its future visitors by making the world map readable. When curators label exhibits clearly, they help everyone who walks through the door learn something new.

SOCRATIC QUESTIONS

- *How is labeling a map an act of service?*
- *Who benefits when you do this work?*

What Do You See from Space?

NOTICE

INSERT IMAGE

*NASA 'Blue Marble' photograph of Earth from space.
Continents and oceans clearly visible.
Save as: source-3-05-01-earth-from-space.jpg*

LOOK CLOSELY

If you looked at Earth from space, you'd see two things right away

Large areas of LAND
Large areas of WATER

What colors stand out? Where is the land? Where is the water?

SOCRATIC QUESTIONS

- *What do you notice first when you look at Earth from space?*
- *Is there more land or more water?*

The Two Big Categories

NAME

CONTINENTS

The big land areas on Earth.
There are 7 continents.
Asia is the biggest. Australia is the smallest.

OCEANS

The big water areas on Earth.
There are 5 oceans.
The Pacific is so big that all 7 continents could fit inside it!

INSERT IMAGE

Simple diagram showing land
land areas (continents) and water
Color-coded: green for land

DISCOVERY

The Seven Continents

NAME

North America

Home to the U.S., Canada, and Mexico

South America

Home to the Amazon rainforest and the Andes

Europe

A smaller continent connected to Asia

Africa

The second-largest continent, with the Sahara Desert

Australia

The smallest continent — also a country!

Antarctica

Coldest, driest continent — covered in ice, no country owns it

DISCUSSION

Could You Tell Them Apart?

INSERT IMAGE

*Blank world map with continent shapes visible
but NO labels or names.
Shapes only, no text.*

SOCRATIC QUESTIONS

- *If a visitor looked at this map with no labels, could they tell the shape?*
- *What would help them know for sure?*
- *Why do shapes alone not tell the whole story?*

CHAT FRAME

"Turn to a partner. Point to two continents on the blank map."

"Can your partner guess which ones they are? Why or why not?"

The Five Oceans

NAME

Pacific Ocean

The largest and deepest ocean. Stretches between Asia and the Americas. All 7 continents could fit inside it!

Atlantic Ocean

The second-largest ocean. Separates the Americas from Europe and Africa.

Indian Ocean

The third-largest ocean. Located between Africa, Asia, and Australia.

Arctic Ocean

The smallest and coldest ocean. Located around the North Pole.

The Volunteer's Mistake

NARRATE

CHAT FRAME

"A young museum volunteer tried to put the labels up last night but got confused about which ocean was which."

"He mixed up the Atlantic and the Pacific."

"That's exactly why labels need to go in the right places -- visitors trust that the map is correct."

THINK ABOUT IT

What could go wrong if a visitor trusted a label that was in the wrong place? What if they planned a trip using the wrong ocean name?

INSE

A world map with
labels swapped
Clearly wrong place

DISCUSSION

Why Correct Labels Matter

SOCRATIC QUESTIONS

- *What happens when a visitor trusts a label that is wrong?*
- *Why is accuracy an act of service to museum visitors?*
- *How does labeling help people understand how the world is organized?*

CHAT FRAME

"Share one reason labels matter with your partner."

"Who benefits from accurate labels?"

KEY IDEA

Earth has seven continents and five oceans. Labeling where places are and how the world is organized.

This connects to your assignment!

You'll need to explain why labels matter in your Curator Task

Labels Help Visitors Understand the World

INSERT IMAGE

*Labeled political world map showing all 7 continents
and 5 oceans with clear text labels.
Save as: reference-3-05-01-labeled-world-map.jpg*

THEN AND NOW

Long ago, many people didn't know all seven continents existed. Today, satellites show us the whole Earth at once.

SOCRATIC QUESTIONS

- What stayed the same about the human need to name things?
- Why do we still label maps today, even with satellites?

Model: Name All Seven Continents

TEACHER MODELS

Watch me think aloud: "I know there are 7 continents. Let me name them all, starting with where we live..."

North America, South America, Europe, Asia, Africa, Australia, Antarctica

"Which one is the largest? Asia! I remember because it has the most people and the tallest mountains."

This models exactly what students need to do for Evidence Q1: Name all seven continents. Which one is the largest?

INSERT IMAGE

MEMORY TRICK

Start with where you live (North America), then go south, jump across the equator to Australia, and finally down to Antarctica at the bottom.

We Try: Match Continents

TOGETHER

I'll read the description. You tell me which continent it is.

The biggest continent. Home to the Himalayas. More people live here than anywhere else.

The second-largest continent. Has the Sahara Desert in the north and savannas in the middle.

The coldest, driest continent. Covered in ice. No country owns it.

Your Turn: Name That Ocean!

ON YOUR OWN

Read each description. Write the ocean name in your Curator's Notebook.

1. The largest and deepest ocean. It stretches between Asia and the Americas.

2. The second-largest ocean. Separates the Americas from Europe and Africa.

3. Located between Africa, Asia, and Australia.

4. The smallest, coldest ocean. Around the North Pole.

What Went Wrong?

STUDENT SAMPLE (WITH ERRORS)

Question: Name all seven continents.

Answer: "North America, South America, Europe, Asia, Africa, and Australia. The biggest one is Africa."

What's wrong? Find TWO mistakes.

ERRORS TO FIND

1. Missing a continent! Antarctica is the 7th.
2. The biggest continent is Asia, not Africa. Africa is the second largest.

SOCRATIC QUESTIONS

- How can you double-check that you named all seven?
- What memory trick helps you remember the largest continents?

Tricky One: Labels Gone Wrong

SCENARIO

A visitor is planning a boat trip across the Atlantic Ocean. She looks at the museum map, but the volunteer put the "Atlantic" label where the Pacific should be.

She ends up planning to cross the wrong ocean!

In your own words, explain:

Why did the wrong label cause a problem?

What could go wrong for the visitor?

THINK-PAIR-SHARE

1. Think about the scenario on your own (30 sec)
2. Share your answer with a partner (1 min)
3. Be ready to share with the class

ASSIGNMENT CONNECTION

Evidence Q2: Why did the young museum volunteer's mistake with wrong if ocean labels are in the wrong places?

Quick Self-Check

1. How many continents are there on Earth?

Seven! North America, South America, Europe, Asia, Africa, Australia, Antarctica.

2. Which is the largest ocean on Earth?

The Pacific Ocean -- so big all 7 continents could fit inside!

3. Why do museum visitors need labels on a world map?

What You'll Turn In

EVIDENCE QUESTION 1

Name all seven continents. Which one is the largest?

List all seven continents, then tell which one is the biggest.

EVIDENCE QUESTION 2

Why did the young museum volunteer's mistake with the Atlas wrong if ocean labels are in the wrong places?

Think about what happens when a visitor trusts a label that is wrong.

CURATOR TASK: WORLD MAP LABEL CARD

Write a label card for the World Map Hall entrance explaining why continent and ocean labels matter.

The head curator wants to place a small card near the entrance of the World Map Hall. It should explain to visitors why the map has labels for each continent and ocean. Write 2-3 sentences for this card.

Explain what continents and oceans are and why labeling them helps visitors.

Chronicle and Checklist

CURATOR'S CHRONICLE

Finish this sentence in your own words:

In this exhibit, I learned that ____ because ____.

TURN-IN CHECKLIST

☐

I answered the evidence questions.

☐

I completed the Curator Task: World Map Label Card.

☐

I wrote my Curator's Chronicle.

CLOSING

Great Work, World Geography Curator!

You labeled the continents and oceans and explained why those labels help museum visitors understand the world.

COMING NEXT: LESSON 3.05.02

The continents and oceans are labeled -- but when the head curator steps back, the young volunteer is picking something up. A whole stack of feature cards -- mountains, rivers, plains, lakes -- slid off the map overnight.

"We have to put them all back," he says.

Tomorrow you'll help him figure out where each one belongs.
